

# Measuring Your French Door Refrigerator

**Notes:**

- For the Depth of your fridge (measurement **M**), measure the body of the refrigerator only - measure the depth of the doors (measurement **O**) separately. For Measurement **O** (door depth), measure at the thickest point.

- For Measurement **O** (door depth), measure at the thickest point (should be the center of the fridge).

- For Measurements **F<sup>1</sup>** and **F<sup>2</sup>** (door handles), measure from the edge of the door inwards to the farthest edge of the door handle - this helps us account for door handles that aren't mounted flush to the edge of the door. For **G<sup>1</sup>** and **G<sup>2</sup>** measurements, measure the length of the door that the handles cover at the farthest points. Do not measure the handles along their raised (curved) areas, as that will give a false (longer) measurement.

- If your refrigerator doesn't have an ice/water dispenser, ignore measurements **H**, **J**, **K**, and **L**
